

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Previously Presented) A portable electronic apparatus, comprising:  
a housing having a wall and an opening to a battery compartment;  
a battery pack positioned in the battery compartment; and  
a battery compartment lid that is integrally arranged in the wall of the housing and is arranged to cover at least partly the battery pack and the battery compartment, said battery compartment lid being a lever element that is arranged to bend a material of lower hardness, external to the portable electronic apparatus, by way of a leverage effect, wherein the material of lower hardness includes a bottle cap.
2. (Canceled)
3. (Previously Presented) A portable electronic apparatus as claimed in claim 1, wherein the lever element is arranged to open metal closures and is connected to the housing.
4. (Previously Presented) A portable electronic apparatus as claimed in claim 1, wherein the lever element is made of metal and/or ceramic.
5. (Previously Presented) A portable electronic apparatus as claimed in claim 1, wherein the lever element is constructed as an angled metal plate having an edge with an angle that enables opening the bottle cap by leverage.
6. (Previously Presented) A mobile telephone, comprising  
a housing having a wall and an opening to a battery compartment;

a battery pack positioned in the battery compartment; and  
a battery compartment lid that is integrally embedded in the wall of the housing and is arranged to cover at least partly the battery pack and the battery compartment, said the battery compartment lid being a lever element structured to remove a bottle cap from a bottle by bending the bottle cap using a leverage effect.

7. (Previously Presented) A mobile telephone housing, comprising:  
a synthetic material structure having a wall and an opening for exposing a battery pack of a mobile telephone;  
a battery compartment lid that offers protection against shocks and pressure, the battery compartment lid being a lever element that is integrally arranged in the wall of the synthetic material structure and is arranged to cover at least partly the battery pack, said lever element being arranged to bend a material of lower hardness, external to the mobile telephone housing, by way of a leverage effect, wherein the material of lower hardness includes a bottle cap.

8. (Previously Presented) The mobile telephone housing of claim 7, wherein the lever element is made of metal and/or ceramic.

9. (Previously Presented) The mobile telephone housing of claim 7, wherein the lever element is constructed as an angled metal plate having an edge with an angle that enables opening the bottle cap by leverage.

10. (Previously Presented) The portable electronic apparatus as claimed in claim 1, further comprising a connection unit for connecting the battery pack to a charging apparatus, wherein the battery compartment lid covers the connection unit.

11. (Previously Presented) The mobile telephone of claim 6, wherein the lever element is made of metal and/or ceramic.

12. (Previously Presented) The mobile telephone of claim 6, wherein the lever element is constructed as an angled metal plate having an edge with an angle that enables opening the bottle cap by leverage.

13. (Previously Presented) The mobile telephone of claim 6, further comprising a connection unit for connecting the battery pack to a charging apparatus, wherein the battery compartment lid covers the connection unit.

14. (New) The portable electronic apparatus of claim 1 wherein the lever element is an angled lever element that defines an angled portion that provides the leverage effect.

15. (New) The mobile telephone housing of claim 7, where most of the telephone housing is non-metal and the lever element comprises metal.
